Proposal Title

ESRM 462: November Tour & Conference

Total Amount Request from IRA

1,750

Brief Activity Description

This funding request is to support augmented activities in our ESRM 462: Coastal Management course.

This would support an in-person field experience (a 3 day camping trip to visit various sites/themes we are discussing in our class) and a virtual conference (BlueTech Week; <https://www.tmabluetech.org/bluetech-week>) with entrepreneurs who are developing new technologies to respond to coastal management challenges across the globe.

This would support:

- 1) trou fees (camping/day use fees) for a three day trip up the central coast (total costs \$250)
- 2) bulk registration for 30 seats for the week-long virtual BlueTech Week Conference (at \$50 per seat, total cost \$1,500)

BlueTech Week Conference

Students from ESRM 462 (Coastal and Marine Management) will participate in a 5-day virtul ocean summit as part of an optional class field experience. We have previously attended this event in 2018. This year, the organizers are again inviting university students to participate in a particular track: the Ocean STEM/Workforce Development track. Our students would both attend and present work from my lab (our AARR apprenticeship program) as well as longitudinal research they and previous ESRM 462 students have been conducting each September since 2006 exploring the perceptions of coastal management and the behaviors of coastal zone residents. Knowing of CI's work with STEM engagement, Michael B. Jones, President of The Maritime Alliance & TMA Foundation and organizer of the summit, has extended an invitation to CI students after speaking to our class in 2016, 2017, & 2018.

This is a unique opportunity for our undergrads to meet with ocean thought leaders and tech start-ups working across the coastal zone. It would be quite valuable for students to both engage with other coastal professionals and showcase their emerging skill sets outside of the context of a traditional academic conference.

Activity or Event Date

11/15/2021

ESRM 462, ESRM 491

Learning Outcomes & Relation to Course Offering

This summit will support the general learning outcomes of ESRM 462, including:

By the end of this course, you should understand and be able to clearly articulate:

- the major environmental issues at the regional, national, and international levels related to coastal and marine conservation and management.
- the processes by which regional, national, and international governments and organizations manage coastal and marine environments.
- complexities inherent in coastal and marine management and the relationship between terrestrial and aquatic systems.
- various management options for coastal environments.
- the current state of our coastal and marine communities, resources, and economies.

Is this activity off campus ?

Yes

Off Campus - Describe benefit brought back to campus

Each student attending will be asked to create a brief video summary of their experience in the field (on the camping trip) and in the virtual conference and networking sessions (recording interviews and presentation summaries) for posting on our YouTube Channel. This will allow students who 1) did not attend this year or 2) students in future years to glean the key insights and developments from these issues and challenges.
