25) Grade Points received – this is the first factor in a student’s GPA. This number is calculated by taking the number of grade points received for a grade (on a 4-point grading scale, A = 4 points) and multiplying that number by the number of units for which the student took the class. That is, if a student gets an A grade in a 3 unit class and A = 4 points, they get 12 grade points for the class.

26) Units taken for a letter grade – this is the second factor in a student’s GPA, and should be the same as item 10.

27) GPA – this is item 25 divided by item 26. In the example above, $175/66.5 = 2.632$
