

Facilities Services Recent Maintenance Repair and Landscape Activities at University Glen

Facilities Services (FS) is pleased to share an update of our new, ongoing and recently completed projects. We continually strive to improve and maintain University Glen and our beautiful campus. Our staff takes pride in providing the highest quality service by using resources effectively and efficiently.

Fire Hydrant Flush

FS Staff continue to inspect the fire hydrants located throughout the University Glen community. The fire hydrants are being tested for functionality in case of an emergency. These functionality tests require the fire hydrants to be temporarily turned on to remove dirt and debris accumulation. The water released from these fire hydrant tests is collected to water the plants and trees of the campus. This project is being conducted to promote safety, preparation, and sustainability for the community.

Trip Hazard Repairs

FS Staff are in the process of repairing trip hazards found on the sidewalks of Anacapa Island Drive in the University Glen community. These repairs entail the removal and replacement of uneven concrete slabs. The replacement concrete will contain reinforced metal bars within its structure to ensure that the sidewalk remains even for years to come. This project will provide a safer walking environment for the pedestrians of University Glen.

Thank you for following our Project Updates!
