While there is no organized opposition at this time, some have voiced concern about the cost of the bond for the state, the variety of new programs funded, and the fact that it is designed to fund only two years of need. Proponents argue that it is a fiscally responsible way to finance school repair and construction, makes schools earthquake safe, and it does not bite off more than the state can afford now.

For more information about the bond as well as arguments for and against the measure, visit www.ss.ca.gov/elections, click on the “Voter Information Guide” button and scroll down to “Prop 1-D.”
Infrastructure Improvements
Work would include needed electrical infrastructure and distribution capacity to meet critical deficiencies on the campus. It includes a new distribution system for hot and chilled water to provide building heating and cooling. This would replace the existing steam system in order to improve energy efficiency. Additional water, wastewater, storm drain, reclaimed water, natural gas, electrical, and telecom capacity would also be provided to meet enrollment growth needs and to repair and replace systems that are currently 50-70 years old.

Nursing Renovation
Funding would address the needs of the nursing program currently scheduled to launch in the fall of 2007. It will allow the campus to renovate an existing building to include simulator lab stations, computer stations, and lab support areas. This program already has an interest list of 500 students.

Classroom/Faculty Office Renovation/Addition
Proposition 1D would provide funding for the architectural drawings to renovate existing space and provide for new construction to provide additional classroom and faculty space.

Entrance Road
The monies would also be used to develop planning and engineering designs for the entrance road that will be required when the Lewis road expansion from two to four lanes is completed.

Future North Hall

Current Entrance Road

FAST FACTS
- Currently, for every dollar the state invests in CSUCI, the local economy is enhanced by $3.05. This economic multiplier will grow as long as the campus is able to continue to grow as well.
- College graduates earn on average $1 million dollars more over their lifetime than someone who does not earn a college degree. Growing numbers of graduates from CSUCI means more dollars being pumped into the economic engine of this region.
- As an endorsement and recognition of the University’s success and rapid growth, the CSU Office of the Chancellor has placed every one of CSUCI proposed projects for consideration into this bond measure as a “high priority,” higher than many of the larger, more established campuses in the CSU system.
